ITS-VII Coordination

Question:
In Section 3, page 2 (Prime Vendors Qualifications/Experience) the scope of services says:

"Experience in developing and managing data repository systems"

What kind of data repository is the Scope of Services referring to? Are you talking about:
- Real-time traffic and vehicle data?
- Project, program, and research data?
- Or some other kind of data that you will provide some additional definition to?

Again, what type of data repository are you referring to?

Answer:
The following states the type of data repository the Scope of Services is referring to:

- Real-time traffic/vehicle data and/or historical data.
- Project, program and research data that involves VII, ITS, vehicle traffic, and/or roadway data.

We need to know that the vendor has the ability to prioritize, store, and access data.
